

DATA MODUL presents new 15 inch XGA high-brightness display based on AHVA technology

Munich, 15th September 2022

DATA MODUL, one of the world's leaders in display, touch, embedded, monitor and panel PC solutions, is expanding its display portfolio and presents a new 15 inch high-brightness display from AUO in 4:3 format based on AHVA technology and with a resolution of 1024x768. As an outdoor display, it is for example ideal for HMI applications in industrial use or for ATMs.

"Outdoors, displays are often exposed to particularly high ambient brightness. Especially when exposed to direct sunlight, it is very difficult to read the screen contents on displays with conventional brightness levels, making them unsuitable for outdoor use. We are therefore proud to present our new 15 inch high-brightness display with 1,800 cd/m², which is specially designed for use in bright environments," says Oguz Goekce, Product Manager at DATA MODUL.

Thanks to AHVA technology and a viewing angle of 89° (L/R/U/D), content is displayed with a high contrast and excellent colour quality. The integrated AHVA technology ensures that there is no optical colour shift for the viewer from different viewing angles. In addition, the G150XAN02.2 distinguishes itself through its thin construction of only 9.3mm installation depth and can be used in the temperature range from -30°C to +70°C. DATA MODUL also guarantees a long-term availability of three to five years for the display.

About DATA MODUL

DATA MODUL AG is one of the world's leading specialist providers of display, touch, embedded, monitor and panel PC solutions. Since it was established in 1972, it has consistently pursued the objective of providing its customers with state-of-the-art, tailor-made and individually customised complete solutions for display technologies.

Many years of experience in the field of display, touch, embedded and system technologies enable the company to produce customer-specific value-added services for a variety of industries at its 45,000 m² production and logistics facilities. The extensive distribution portfolio of displays, touchscreens and embedded solutions and the increasingly innovative in-house developments complete the unique modular product portfolio.
