

Art Goes Digital

DATA MODUL adds ART Displays to portfolio

Munich, 21st February 2024

DATA MODUL is adding ART displays to its product portfolio; these are specialised industrial TFT displays that set new standards in the digital display of works of art and informative content.

ART displays are characterised by their exceptional level of detail and offer an authentic reproduction of paper and drawing structures as well as a convincingly realistic presentation of oil paintings, photos and moving content. The very high haze value and extremely matt surface of the displays minimises unwanted reflections. Moreover, the displays impress with their high colour intensity and resolution.

The presentation of both static and moving content clearly show the versatile range of applications offered by the TFT displays. An integrated ambient light sensor automatically adjusts the backlight to the current lighting conditions.

The addition of these innovative displays opens up a wide range of potential applications ranging from use in conjunction with IoT devices in white goods for displaying cooking recipes to ideal areas of application in digital signage, as advertising spaces, in the catering industry, hotels, exhibition spaces, museums and art galleries.
