

DATA MODUL obtains IATF 16949 certification

Munich, 4th April 2024

Since December 2023, the Munich-based system solution provider DATA MODUL has successfully obtained a IATF 16949 certification. A prerequisite for this certification, developed by the International Automotive Task Force (IATF) and based on ISO 9001, are comprehensive quality management standards from companies in the automotive supply chain. The main areas of the voluntary certification are product safety, risk management and emergency planning, requirements for products with embedded software as well as change, warranty and supplier management.

The development of IATF 16949:2016 became necessary in order to meet the demand for an internationally valid document with globally standardised QMS requirements. The standard combines all important requirements of already published national quality standards for the automotive industry, such as QS-9000, VDA 6.1, EAQF 94 and AVSQ. It offers a comprehensive quality improvement concept by means of which organisations, automotive manufacturers and suppliers can officially prove that they are committed to excellence, efficiency and on-time delivery. DATA MODUL has made appropriate adjustments and optimisations to internal processes. This way, the company guarantees the highest standards in product quality, process stability and continuous improvement.

Murat Güngör, Product Manager - Mobility at DATA MODUL: “The IATF 16949 certification confirms our quality standards and demonstrates our in-depth expertise regarding the requirements of the automotive industry. Alongside suitable products, we offer comprehensive solutions that can be seamlessly integrated into our customers’ production processes.”
