

DATA MODUL showcases 31.5" MiniLED display for gaming applications at G2E 2025

Munich, 11 August 2025

At this year's Global Gaming Expo (G2E) in Las Vegas, DATA MODUL is presenting a 31.5" UHD MiniLED display that is specially tailored to the requirements of the gaming environment. With advanced local dimming technology and high brightness, the display is ideal for casino applications and other gaming scenarios in 24/7 operation.

With a resolution of 3840 x 2160 pixels, a typical brightness of 800 cd/m² and a contrast ratio of 100,000:1, the display offers razor-sharp images with high depth effect. The 1,152 individually controllable dimming zones enable particularly precise control of the backlighting and deepest black levels – almost at OLED level. At the same time, the display scores with high energy efficiency, which makes it particularly attractive for continuous operation. A large colour space of 105% NTSC also ensures brilliant colours and detailed image reproduction.

Particularly relevant for gaming use: the targeted light control of individual zones makes it possible to highlight visual highlights such as jackpots or special game sequences. At the same time, the balanced brightness distribution prevents eye strain – for a more comfortable gaming experience on the device.

Another advantage is the full bonding that DATA MODUL offers inhouse: It ensures lower reflections, better contrast in difficult lighting conditions and greater robustness of the display.

Visitors to G2E 2025 can experience the 31.5" MiniLED display and other highlights live from 6 to 9 October at the DATA MODUL stand #1941 in Las Vegas.
