

DATA MODUL expands EMS capabilities with fully integrated assembly and supply chain services

Munich, 18 February 2026

DATA MODUL continues to expand its service portfolio in industrial product assembly. Customers benefit from customised manufacturing solutions offering a high degree of flexibility, quality and planning reliability.

Unlike traditional Electronic Manufacturing Services (EMS) providers, which primarily focus on electronic PCB assembly, DATA MODUL specialises on the assembly of complete units – ranging from display, touch and bonding components to fully functional sub-assemblies and end devices produced at its global manufacturing sites. As an EMS partner, DATA MODUL also takes responsibility for end-to-end project execution, covering component sourcing, manufacturing and delivery.

Efficient processes. Holistic service approach.

DATA MODUL's assembly and logistics services include:

- Procurement of specified components through partner agreements and DATA MODUL's global sourcing network
- Quality assurance for components, sub-assemblies and finished devices
- Coordination and documentation by experienced project teams
- Tailored logistics solutions with direct-to-destination delivery
- On-demand after-sales service, extending beyond project completion if required

By assuming responsibility for key processes, DATA MODUL significantly reduces interfaces and coordination efforts for its customers. The result is increased reliability, quality and transparency throughout the entire supply chain. In addition, DATA MODUL's experienced R&D team supports the development process from design-in through to series production – acting as a trusted partner on the path to a fully assembled, market-ready product.

Technology and expertise for a wide range of requirements

With state-of-the-art manufacturing technologies, including bonding, prototyping, testing procedures and product qualification, DATA MODUL creates optimal conditions for the successful implementation of various projects. Whether low volumes during ramp-up phases or higher production volumes, manufacturing capacities are fully scalable and designed for maximum flexibility.

We act as an extension of our partners, providing flexibility, expertise and practical solutions. Customers increasingly expect holistic, end-to-end services that reduce complexity and allow them to focus on their core business," says Dr Florian Pesahl, CEO of DATA MODUL.

About DATA MODUL

As a passionate enabler, DATA MODUL AG does everything in its power to turn customers' visions into reality. With a comprehensive understanding of hardware, software and services as a harmonious unit, the focus is on developing customised display solutions that precisely meet the specific needs and objectives of the customer. The outstanding core competence of DATA MODUL AG lies in customising, whereby the company not only provides products, but rather tailor-made solutions with a clear market focus. With over 50 years of experience, DATA MODUL AG represents financial stability, innovative strength and international growth. Its presence at more than 20 locations worldwide and a total area of around 40,000 square metres for production, logistics and administration enables the company to respond flexibly to global challenges.
