

DATA MODUL presents 42" panel PC solution for successful customer and visitor management

Munich/New York, August 4, 2020

DATA MODUL presents a new smart digital signage system that helps to address current hygiene and protection measures for the wholesale and retail sectors, as well as public spaces.

The monitor has a built in panel PC with integrated camera and microphone and can be operated with DATA MODUL's own digital signage software maXcs®.

By the combination of camera, microphone and software, the system is capable of supporting simplified management of visitor flows, e.g. monitoring the number of people within certain areas, for example at entrances.

The new 42" digital signage solution is part of the Narrow Bezel Protected Series from DATA MODUL. This series design is not only robust, slender and visually appealing, but also achieved outstanding results in fire behavior tests (A2-s1,d0), rendering the need for any additional fire protection housing unnecessary.

All monitors and panel PCs in the series are IP40 classified on the front. The combination of both these protection classes therefore makes this an interesting proposition for use in areas where implementation for any rescue or evacuation measures is required.
