# PRODUCT SPECIFICATION

## 1. GENERAL DESCRIPTION

### 1.1 OVERVIEW

HK173VB-01B is a Color Active Matrix Liquid Crystal Display composed of a TFT LCD panel, a driver circuit, and LED backlight system. The screen format is intended to support the 16:9 UHD, 3840(H) x2160(V) screen and with LED backlight driving circuit. All input signals are eDP(Embedded DisplayPort) interface compatible.

### 1.2 GENERAL SPECIFICATIONS

Item	Specification	Unit	Note
Screen Size	17.3" (diagonal)	inch	-
Driver Element	LTPS TFT active matrix	-	-
Pixel Number	3840x R.G.B. x 2160	pixel	-
Pixel Pitch	0.09945(H) x 0.09945(V)	mm	-
Pixel Arrangement	RGB vertical stripe	-	-
Contrast Ratio	12,000:1 typ		
Response Time [ms]	25(typ)	[ms]	
Transmissive mode	Normally black	-	-
Surface Treatment	AG	-	-
Luminance, White	SDR : 450 (typ) 400(min) HDR : 600 (typ) Support HDR 10% :1000 (min)	nits	-
HDR	HDR 1000		
Electrical Interface	eDP1.4		
Glass Thickness(LCM)	0.3+0.3	mm	
Frame Rate	120	HZ	
Power Consumption (include LED driver efficiency)	Total 23.771 W (Max.) @ cell 2.871 W (Max.)	W	(1)

Note (1) The specified power consumption (with converter efficiency) is under the conditions at LCD\_VCC =3.3V, fv = 120Hz, LED\_VCCS = 19V HDR off and Ta = 25 ± 2 °C, whereas white pattern is displayed.

## 2. MECHANICAL SPECIFICATIONS

Item	Min.	Typ.	Max.	Unit	Note	
Module Size	Horizontal (H)	389.59	389.89	390.19	mm	(1)(2)
	Vertical (V, w/o FPC)	226.71	227.01	227.31	mm	
	Vertical (V, w/i FPC)	-	227.31	-	mm	
	Thickness (T)	-	3.25	3.5	mm	
Active Area	Horizontal	-	381.888	-	mm	
	Vertical	-	214.812	-	mm	
Weight	-	-	535	g		

Note (1) Please refer to the attached drawings for more information of front and back outline dimensions.

module\_hk173vb-01b\_20210817.pdf

Note (2) Dimensions are measured by caliper.

## 2.1 CONNECTOR TYPE

Please refer appendix outline drawing for detail design.

Connector Part No.: I-PEX 20682-040E-02

## PRODUCT SPECIFICATION

### 3. ABSOLUTE MAXIMUM RATINGS

#### 3.1 ELECTRICAL ABSOLUTE RATINGS

##### 3.1.1 TFT LCD MODULE

Item	Symbol	Value		Unit	Note
		Min.	Max.		
Power Supply Voltage	LCD_VCC	3.0	3.6	V	(1)
Converter Input Voltage	LED_VCCS	12	21	V	(1)
Converter Control Signal Voltage	LED_PWM,	3.1	3.5	V	3.3V +/-5%
Converter Control Signal Voltage	LED_EN	3.1	3.5	V	3.3V +/-5%

Note (1) Stresses beyond those listed in above "ELECTRICAL ABSOLUTE RATINGS" may cause permanent damage to the device. Normal operation should be restricted to the conditions described in "ELECTRICAL CHARACTERISTICS".

32	LED_EN	LED On / Off	
33	LED_PWM	PWM signal pin	
34	NC	No connection	
35	NC	No connection	
36	BL_VCCS	Backlight_VCCS input	
37	BL_VCCS	Backlight_VCCS input	
38	BL_VCCS	Backlight_VCCS input	
39	BL_VCCS	Backlight_VCCS input	
40	OD_EN	OD_ENABLE default off, enable by pulling	

Note (1) The first pixel is odd as shown in the following figure.

Note (2) The setting of BIST function are as follows.

Pin	Enable	Disable
BIST_EN	Hi	Lo or Open

Hi = High level, Lo = Low level.

# PRODUCT SPECIFICATION

## 4.3 ELECTRICAL CHARACTERISTICS

### 4.3.1 LCD ELETRONICS SPECIFICATION

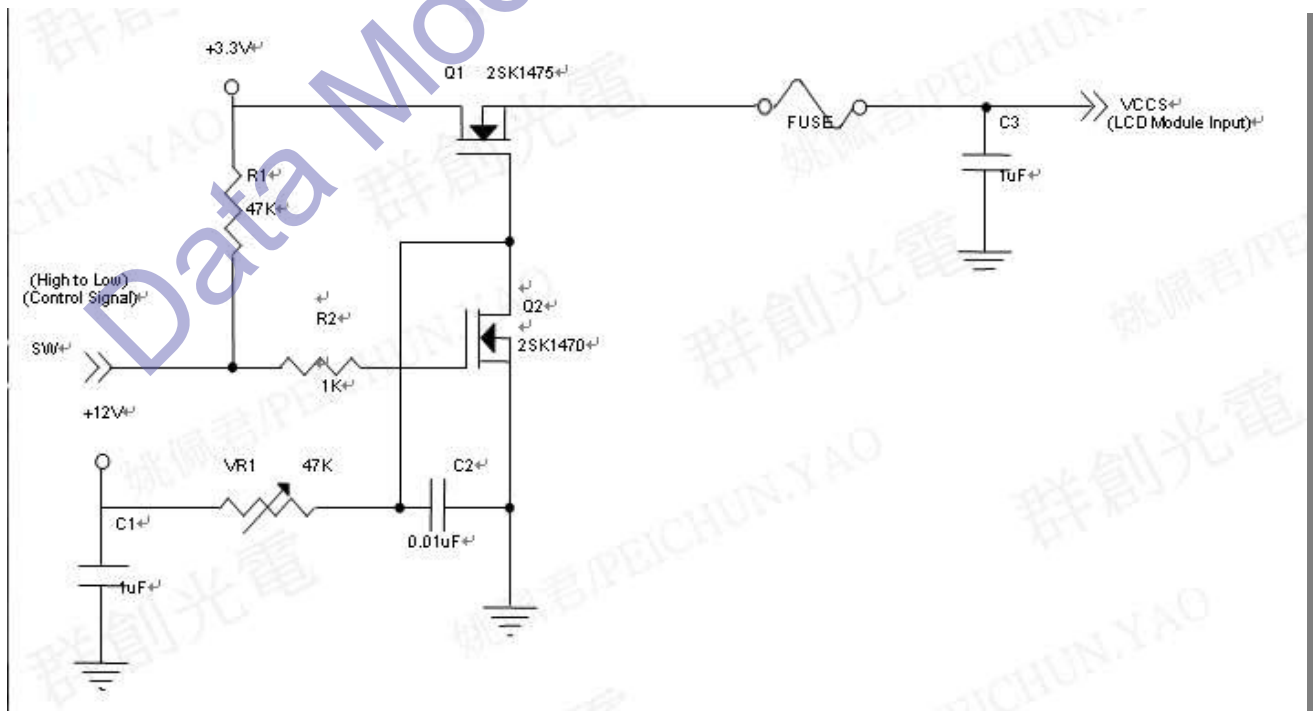

Parameter	Symbol	Value			Unit	Note
		Min.	Typ.	Max.		
Power Supply Voltage	LCD_VCC	3.0	3.3	3.6	V	(1)
Ripple Voltage	V <sub>RP</sub>	-	-	100	mV	(1)
Inrush Current	I <sub>RUSH</sub>	-	-	1.8	A	(1),(2)
Power Supply Current	Mosaic 8*8	0.65	-	1.1	A	(3)a
	Black	0.64	-	1.1	A	(3)b
	(HeavyPattern)	1	-	1.55	A	(3)c
HPD output voltage		2.25	-	3.6	V	
HPD Impedance	R <sub>HPD</sub>	-	100K	-	ohm	(4)
HPD	High Level	2.25	-	-	V	(5)
	Low Level	0	-	0.7	V	(5)

Note (1) The ambient temperature is  $T_a = 25 \pm 2^\circ\text{C}$ .

Note (2) I<sub>RUSH</sub>: the maximum current when LCD\_VCC is rising

I<sub>s</sub>: the maximum current of the first 100ms after power-on

Measurement Conditions: Shown as the following figure. Test pattern: black.

## PRODUCT SPECIFICATION

Note (3) The specified power supply current is under the conditions at LCD\_VCC = 3.3 V,  $T_a = 25 \pm 2 \text{ }^\circ\text{C}$ , DC Current and  $f_v = 120 \text{ Hz}$ , HDR off whereas a power dissipation check pattern below is displayed.

a. Mosaic Pattern

b. black

c. Heavy Pattern(pixel on/off)

Note (4) The specified signals have equivalent impedances pull down to ground in the LCD module respectively. Customers should keep the input signal level requirement with the load of LCD module. Please refer to Note (4) of 4.3.2 LED CONVERTER SPECIFICATION to obtain more information.

Note (5) When a source detects a low-going HPD pulse, it must be regarded as a HPD event. Thus, the source must read the link / sink status field or receiver capability field of the DPCD and take corrective action.

Note (6) LCD panel self-test (BIST mode) pattern are shown as below image. Each pattern displays 2 sec and recurring.

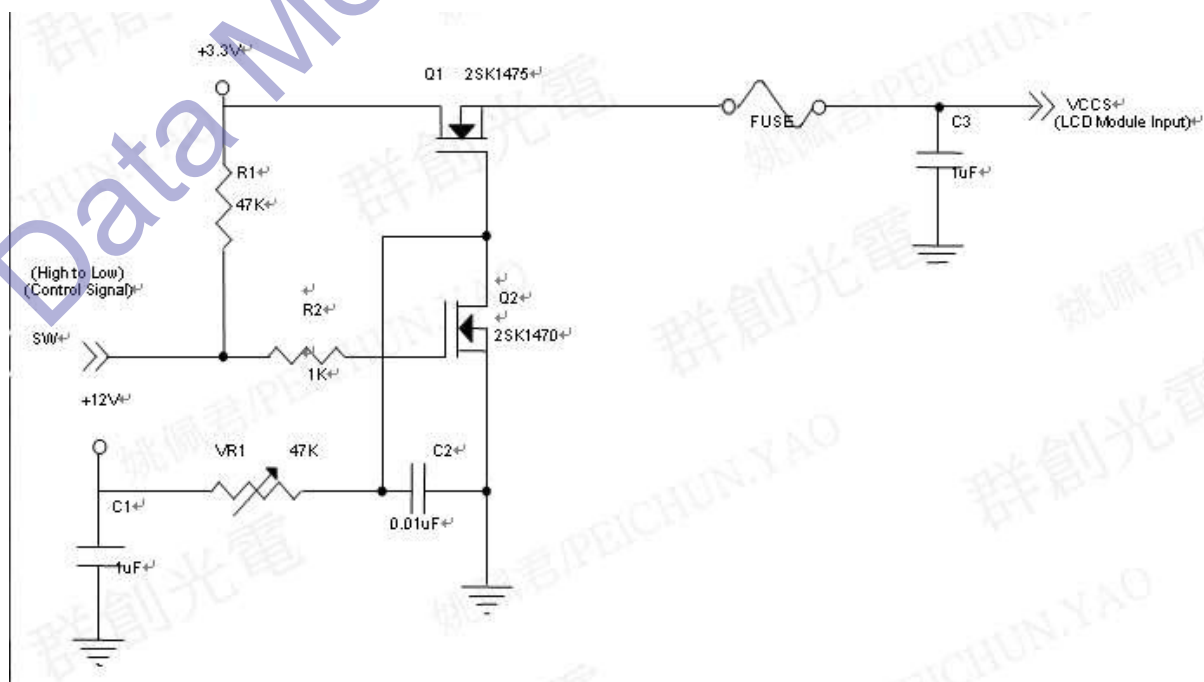

# PRODUCT SPECIFICATION

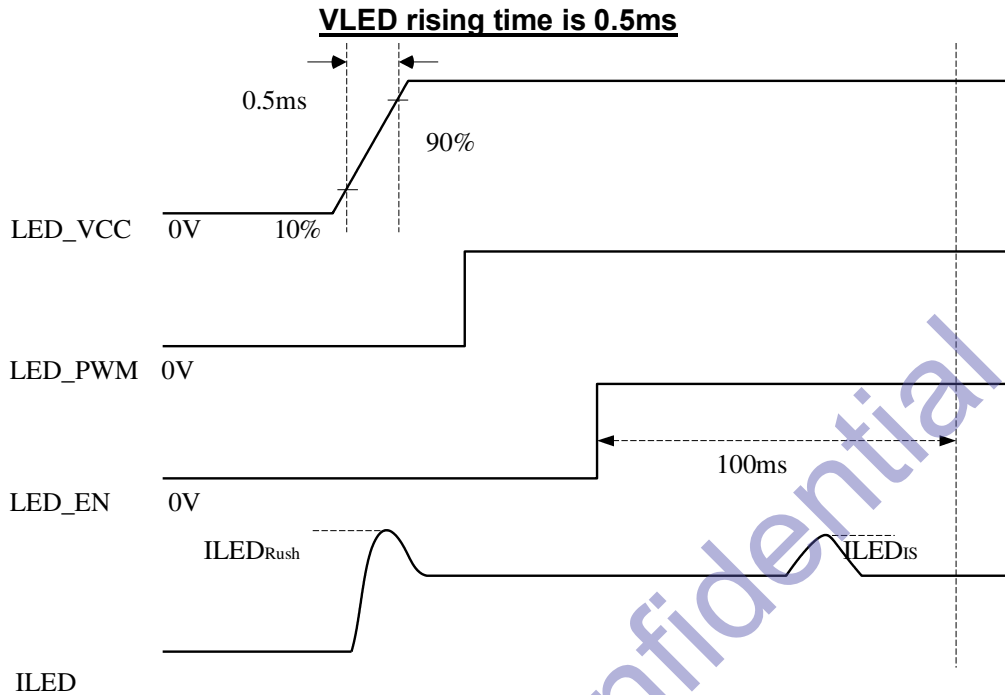

## 4.3.2 LED CONVERTER SPECIFICATION

Parameter	Symbol	Value			Unit	Note	
		Min.	Typ.	Max.			
Converter Input Power Supply Voltage	LED_VCCS	12	-	21	V		
Converter Input Power Supply Current	ILED_VCCS	0.75	-	1.5	A		
Converter Inrush Current	ILEDRUSH	-	-	2.8	A	(1)	
Input Voltage (LED_EN)	High Level	VIH	1.26	-	2.1	V	(4)
	Low Level	VIL	0	-	0.54	V	(4)
LED_EN Impedance	RLED_EN	-	400	-	ohm	(4)	
Input Voltage (LED_PWM)	High Level	VIH	0.81	-	1.35	V	
	Low Level	VIL	0.36	-	0.72	V	
PWM Resolution		7	-	12	bits		

Note (1) ILED<sub>RUSH</sub>: the maximum current when LED\_VCCS is rising,  
 ILED<sub>is</sub>: the maximum current of the first 100ms after power-on,  
 Measurement Conditions: Shown as the following figure. LED\_VCCS = Typ, Ta = 25 ± 2 °C, f<sub>PWM</sub> = 200 Hz, Duty=100%.

## PRODUCT SPECIFICATION

Note (2) If PWM control frequency is applied in the range less than 1KHz, the “waterfall” phenomenon on the screen may be found. To avoid the issue, it’s a suggestion that PWM control frequency should follow the criterion as below.

PWM control frequency  $f_{PWM}$  should be in the range

$$(N + 0.33) * f \leq f_{PWM} \leq (N + 0.66) * f$$

$N$  : Integer ( $N \geq 3$ )

$f$  : Frame rate

Note (3) The specified LED power supply current is under the conditions at “LED\_VCCS = Typ.”,  $T_a = 25 \pm 2$  °C,  $f_{PWM} = 200$  Hz, Duty=100%.

Note (4) The specified signals have equivalent impedances pull down to ground in the LCD module respectively. Customers should keep the input signal level requirement with the load of LCD module. For example, the figure below describes the equivalent pull down impedance of LED\_EN (If it exists). The rest pull down impedances of other signals (eg. HPD, PWM ...) are in the same concept.

Note (5) If the cycle-to-cycle difference of PWM duty exceeds 0.1%, especially when the PWM duty is low, slight brightness change might be observed.

## PRODUCT SPECIFICATION

### 4.3.3 BACKLIGHT UNIT

Ta = 25 ± 2 °C

Parameter	Symbol	Value			Unit	Note
		Min.	Typ.	Max.		
BLU Power Supply Voltage	VL	5.2	5.6	6	V	
BLU Power Supply Current	IL	3.182			A	
Power Consumption	PL	16.54	17.82	19.09	W

# PRODUCT SPECIFICATION

## 4.4 DISPLAY PORT INPUT SIGNAL TIMING SPECIFICATIONS

### 4.4.1 ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Differential Signal Common Mode Voltage(MainLink and AUX)	VCM	0.3		0.7	V	(1)(4)
AUX AC Coupling Capacitor	C_Aux_Source	75-		200-	nF	(2)

Note (1) Display port interface related AC coupled signals should follow VESA DisplayPort Standard Version 1. Revision 1a and VESA Embedded DisplayPort™ Standard Version 1.2. There are many optional items described in eDP 1.2. If some optional item is requested, please contact us.

(2) AUX CH consists of an AC-coupled, doubly-terminated differential pair. Manchester-II coding is used as the channel coding for AUX transaction over AUX CH. AUX CH provides a data rate of 1Mbps.

3) The Main-Link consists of one, two, or four AC-coupled, doubly terminated differential pairs. Eight link rates are supported (1.62/2.16/2.43/2.7/3.24/4.32/5.4/8.1 Gbps). All enabled lanes must be operating at the same link rate. There is no dedicated clock channel. The clock is extracted from the data stream itself that is encoded with ANSI 8b/10b coding rule.

## PRODUCT SPECIFICATION

### 10bit RGB Mapping to a 4-Lane Main-Link

## PRODUCT SPECIFICATION

### 4.5 DISPLAY TIMING SPECIFICATIONS

The input signal timing specifications are shown as the following table and timing diagram.

#### Refresh rate 120Hz (normal mode)

Signal	Item	Symbol	Min.	Typ.	Max.	Unit	Note
DCLK	Frequency	1/Tc	-	1056	-	MHz	-
DE	Vertical Total Time	TV	-	2200	-	TH	-
	Vertical Active Display Period	TVD	-	2160	-	TH	-
	Vertical Active Blanking Period	TVB	-	40	-	TH	-
	Horizontal Total Time	TH	-	4000	-	Tc	-
	Horizontal Active Display Period	THD	-	3840	-	Tc	-
	Horizontal Active Blanking Period	THB	-	160	-	Tc	-

#### 4.5.1 Frame Rate:60HZ

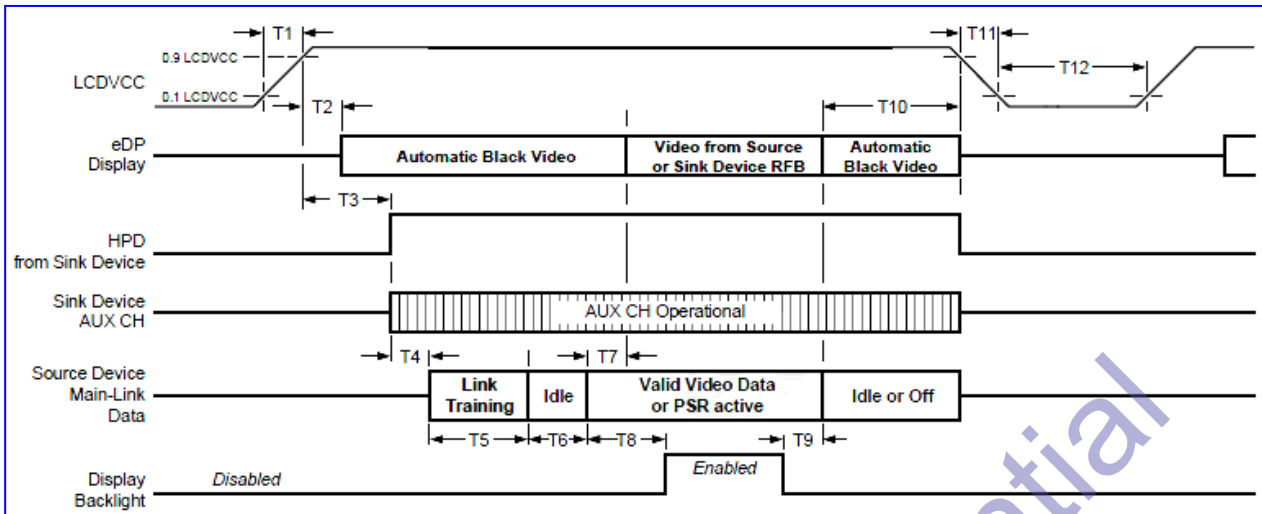

Signal	Item	Symbol	Min.	Typ.	Max.	Unit	Note
DCLK	Frequency	1/Tc	-	533.25	-	MHz	-
DE	Vertical Total Time	TV	-	2222	-	TH	-
	Vertical Active Display Period	TVD	-	2160	-	TH	-
	Vertical Active Blanking Period	TVB	-	62	-	TH	-
	Horizontal Total Time	TH	-	4000	-	Tc	-
	Horizontal Active Display Period	THD	-	3840	-	Tc	-
	Horizontal Active Blanking Period	THB	-	160	-	Tc	-

Note (1) The panel can operate at 120Hz normal mode and 60Hz normal mode and power saving mode, respectively. All reliability tests are based on specific timing of 60Hz refresh rate. We can only assure the panel's electrical function at power saving mode.

**INPUT SIGNAL TIMING DIAGRAM**

#### 4.6 POWER ON/OFF SEQUENCE

#### Time Specifications

Parameter	Description	Reqd. By	Value		Unit	Notes
			Min	Max		
T1	Power rail rise time, 10% to 90%	Source Device	0.5	10	ms	-
T2	Delay from LCD, V <sub>CCS</sub> to black video generation	Sink Device	0	200	ms	Automatic Black Video generation prevents display noise until valid video data is received from the Source device. <sup>2,3</sup>
T3	Delay from LCD, V <sub>CCS</sub> to HPD high	Sink Device	0	200	ms	Sink device AUX CH must be operational upon HPD high. <sup>4</sup>
T4	Delay from HPD high to link training initialization	Source Device	0	-	ms	Allows for Source device to read Link capability and initialize
T5	Link training duration	Source Device	0	-	ms	Dependant on Source device link training protocol
T6	Link idle	Source Device	0	-	ms	Min Accounts for required BS-Idle pattern. Max allows for Source frame synchronization

Parameter	Description	Reqd. By	Value		Unit	Notes
			Min	Max		
T7	Delay from valid video data from Source to video on display	Sink Device	0	50	ms	Max value allows for the Sink device to validate video data and timing. At the end of T7, the Sink device will indicate that it detection valid video data, by setting the RECEIVE_PORT_0_STATUS bit of the STATUS bit of the SINK_STATUS register (DPCD Address 00205h, bit 0) to logic 1, and Sink device will no longer generate automatic Black Video
T8	Delay from valid video data from Source to backlight on	Source Device	80	-	ms	The Source device must assure display video is stable
T9	Delay from backlight disable to end of valid video data	Source Device	50	-	ms	The Source device must assure that the backlight is no longer illuminated. At the end of T9, the Sink device will indicate that it did not detect valid video data, by setting the RECEIVE_PORT_0_STATUS bit of the SINK_STATUS register (DPCD Address 00205h, bit 0;) to logic 0, and the Sink device will automatically display Black Video. <sup>2,3</sup>
T10	Delay from end of valid video data from Source to power off	Source Device	0	500	ms	
T11	V <sub>CCS</sub> power rail fall time, 90% to 10%	Source Device	0.5	10	ms	-
T12	V <sub>CCS</sub> Power off time	Source Device	500	-	ms	

Remark:

1. Please don't plug or unplug the interface cable when system is turned on.
2. The Sink device must include the ability to automatically and autonomously generate Black Video. The Sink device must automatically enable Black Video under the following conditions:
  - Upon LCDVCC power-on (within T2 max)
  - When the "No Video Stream Flag" (VB-ID Bit 3) is received from the Source device (at the end of T9)
3. The Sink device can implement the ability to disable the automatic Black Video function, as described in footnote "2", for system development and debugging purposes.
4. The Sink must support AUX Channel polling by the Source immediately following LCD VCC power-on without causing damage to the Sink device (the Source device can re-try if the Sink is not ready). The Sink device must be able to response to an AUX Channel transaction within the time specified within T3 max.

# PRODUCT SPECIFICATION

## 5. OPTICAL CHARACTERISTICS

### 5.1 TEST CONDITIONS

Item	Symbol	Value	Unit
Ambient Temperature	Ta	25±2	°C
Ambient Humidity	Ha	50±10	%RH
Supply Voltage	Vcc	6	V
Input Signal	According to typical value in "4.3. ELECTRICAL CHARACTERISTICS"		
LED Light Bar Input Current	IL	3393	mA

The measurement methods of optical characteristics are shown in Section 5.2. The following items should be measured under the test conditions described in Section 5.1 and stable environment shown in Note (5).

### 5.2 OPTICAL SPECIFICATIONS

Item	Symbol	Condition	Min.	Typ.	Max.	Unit	Note	
Contrast Ratio	CR		-	12000	-	-	(2),(5),(7)

	HDR			600				
	HDR 10%		1000					
Color Chromaticity	Red	Rx	Typ -0.03	0.679	Typ +0.03	-	(1),(7)	
		Ry		0.308		-		
	Green	Gx		0.236		-		
		Gy		0.699		-		
	Blue	Bx		0.156		-		
		By		0.054		-		
	White	Wx		0.313		-		
Wy		0.329	-					
Color gamut	C.G		95	100	-	%	(8)	
Viewing Angle	Horizontal	$\theta_{x+}$	CR≥10	80	85	-	Deg.	(1),(5),(7)
		$\theta_{x-}$		80	85	-		
	Vertical	$\theta_{Y+}$		80	85	-		
		$\theta_{Y-}$		80	85	-		
White Variation	$\delta W_{5p}$	$\theta_x=0^\circ, \theta_Y=0^\circ$	80	85	-	%	(5),(6),(7)	
	$\delta W_{13p}$	$\theta_x=0^\circ, \theta_Y=0^\circ$	60	65	-	%		

## PRODUCT SPECIFICATION

Note (1) Definition of Viewing Angle ( $\theta_x$ ,  $\theta_y$ ):

Note (2) Definition of Contrast Ratio (CR):

Under Full-screen long-duration sequence displays a full screen

The contrast ratio can be calculated by the following expression.

$$\text{Contrast Ratio (CR)} = L_{255} / L_0$$

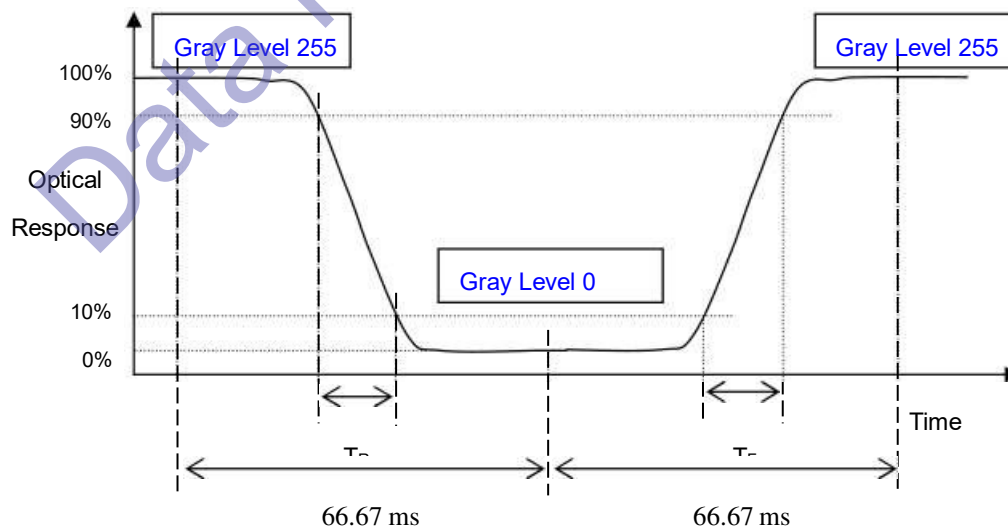

L63: Luminance of gray level 255

L 0: Luminance of gray level 0

$$\text{CR} = \text{CR} (1)$$

CR (X) is corresponding to the Contrast Ratio of the point X at Figure in Note (6).

Note (3) Definition of Response Time (TR, TF): Under DC BLU and room temperature: 25°C

Note (4) Definition of Average Luminance of White ( $L_{AVE}$ ):

Measure the luminance of gray level 255 at 5 points

$$L_{AVE} = [L (1)+ L (2)+ L (3)+ L (4)+ L (5)] / 5$$

L (x) is corresponding to the luminance of the point X at Figure in Note (6)

## PRODUCT SPECIFICATION

### Note (5) Measurement Setup:

The LCD module should be stabilized at given temperature for 20 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 20 minutes in a windless room.

### Note (6) Definition of White Variation ( $\delta W$ ):

Measure the luminance of gray level 255 at 5 points

$$\delta W_{5p} = \{ \text{Minimum} [L(1) \sim L(5)] / \text{Maximum} [L(1) \sim L(5)] \} * 100\%$$

$$\delta W_{13p} = \{ \text{Minimum} [L(1) \sim L(13)] / \text{Maximum} [L(1) \sim L(13)] \} * 100\%$$

## PRODUCT SPECIFICATION

Note (7) The listed optical specifications refer to the initial value of manufacture, but the condition of the specifications after long-term operation will not be warranted.

Note (8) Definition of color gamut (C.G%):

$$C.G\% = \frac{\text{Area of } R G B}{\text{Area of } R_0 G_0 B_0} \times 100\%$$

$R_0, G_0, B_0$  : color coordinates of red, green, and blue defined by NTSC, respectively.

$R, G, B$  : color coordinates of module on 255 gray levels of red, green, and blue, respectively.

$R_0 G_0 B_0$  : area of triangle defined by  $R_0, G_0, B_0$

$R G B$  : area of triangle defined by  $R, G, B$

Note (9) 10 % center patch test (HDR 10%)

Test pattern by Customer system.

- 1) **Black screen** for 60 seconds for cool-down reset.

- 2) **Center Patch test**, 10% of the screen area for 30 minutes.

## PRODUCT SPECIFICATION

### 6. RELIABILITY TEST ITEM

Test Item	Test Condition	Note
High Temperature Storage Test	60°C, 240 hours	(1) (2)
Low Temperature Storage Test	-20°C, 240 hours	
Thermal Shock Storage Test	-20°C, 0.5hour←→60°C, 0.5hour; 100cycles, 1hour/cycle	
Low Temperature Operation Test	0°C, 240 hours	
High Temperature & High Humidity Operation Test	50°C, RH 80%, 240hours	
ESD Test (Operation)	150pF, 330Ω, 1sec/cycle Condition 1 : Contact Discharge, ±8KV Condition 2 : Air Discharge, ±15KV	(2)
Shock (Non-Operating)	220G, 2ms, half sine wave, 1 time for each direction of ±X, ±Y, ±Z	(2)(3)
Vibration (Non-Operating)	1.5G / 10-500-10Hz, 30 min/cycle, 1cycle for each X, Y, Z	(2)(3)

Note (1) Evaluation should be tested after storage at room temperature for more than two hour

Note (2) After the reliability test, the product only guarantees operation function, but don't guarantee all of the cosmetic specification

Note (3) At testing Vibration and Shock, the fixture in holding the module has to be hard and rigid enough so that the module would not be twisted or bent by the fixture.

## PRODUCT SPECIFICATION

### 7. PACKING

#### 7.1 MODULE LABEL

The barcode nameplate is pasted on each module as illustration, and its definitions are as following explanation.

(a) Model Name: **HK173VB-01B**

(b) Revision: Rev. **XX**, for example: B1, B2 ... etc.

(c) Serial ID: **AX X X X XX Y M D L N N N N**

(d) Production Location: MADE IN XXXX. XXXX stands for production location.

# PRODUCT SPECIFICATION

## 7.2 CARTON

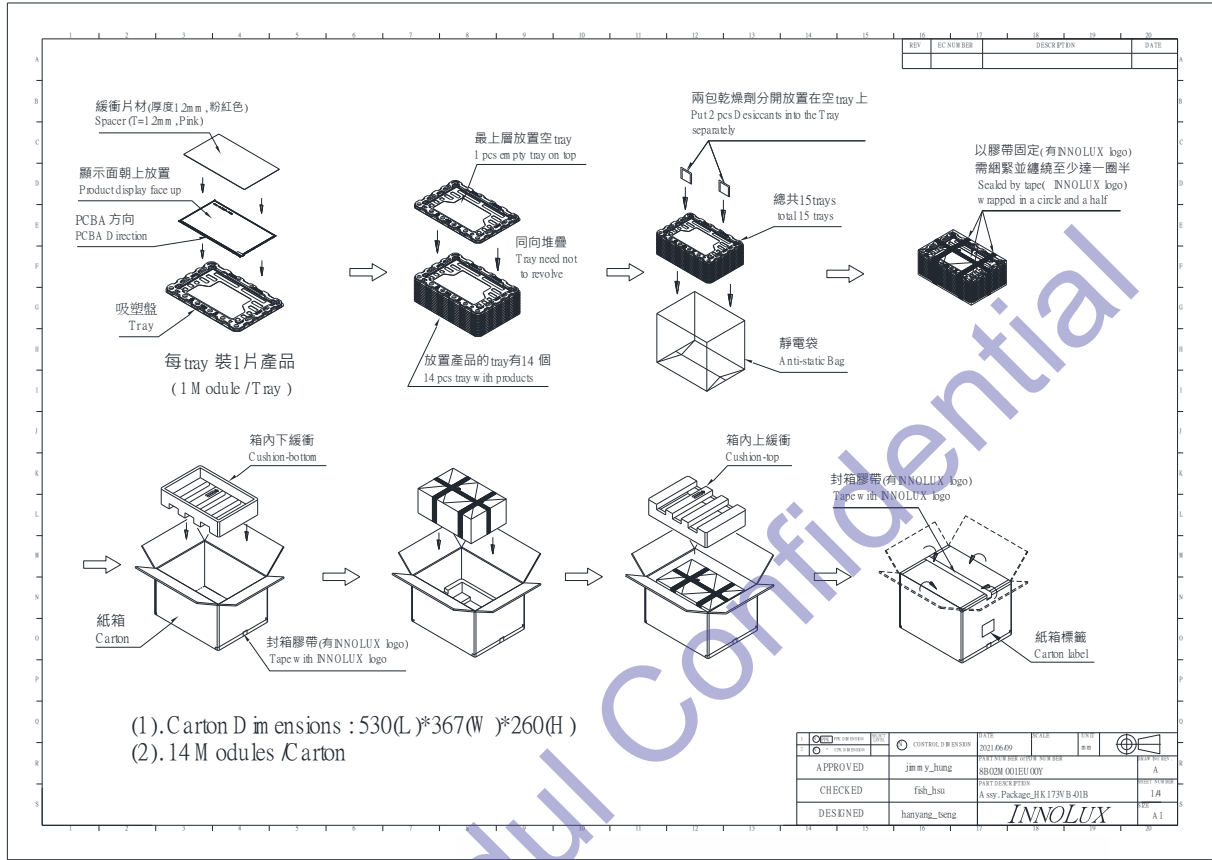

Figure. 7-2 Packing method

## PRODUCT SPECIFICATION

### 8. PRECAUTIONS

#### 8.1 HANDLING PRECAUTIONS

- (1) The module should be assembled into the system firmly by using every mounting hole. Be careful not to twist or bend the module.
- (2) While assembling or installing modules, it can only be in the clean area. The dust and oil may cause electrical short or damage the polarizer.
- (3) Use fingerstalls or soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (4) Do not press or scratch the surface harder than a HB pencil lead on the panel because the polarizer is very soft and easily scratched.
- (5) If the surface of the polarizer is dirty, please clean it by some absorbent cotton or soft cloth. Do not use Ketone type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanently damage the polarizer due to chemical reaction.
- (6) Wipe off water droplets or oil immediately. Staining and discoloration may occur if they left on panel for a long time.
- (7) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contacting with hands, legs or clothes, it must be washed away thoroughly with soap.
- (8) Protect the module from static electricity, it may cause damage to the C-MOS Gate Array IC.
- (9) Do not disassemble the module.
- (10) Do not pull or fold the LED wire.
- (11) Pins of I/F connector should not be touched directly with bare hands.

#### 8.2 STORAGE PRECAUTIONS

- (1) High temperature or humidity may reduce the performance of module. Please store LCD module within the specified storage conditions.
- (2) It is dangerous that moisture come into or contacted the LCD module, because the moisture may damage LCD module when it is operating.
- (3) It may reduce the display quality if the ambient temperature is lower than 10 °C. For example, the response time will become slowly, and the starting voltage of LED will be higher than the room temperature.

#### 8.3 OPERATION PRECAUTIONS

- (1) Do not pull the I/F connector in or out while the module is operating.
- (2) Always follow the correct power on/off sequence when LCD module is connecting and operating. This can prevent the CMOS LSI chips from damage during latch-up.
- (3) The startup voltage of Backlight is approximately 1000 Volts. It may cause electrical shock while assembling with converter. Do not disassemble the module or insert anything into the Backlight unit.

## PRODUCT SPECIFICATION

### Appendix. EDID DATA STRUCTURE

The EDID (Extended Display Identification Data) data formats are to support displays as defined in the VESA Plug & Display and FPD standards.

## Appendix. SYSTEM COVER DESIGN GUIDANCE

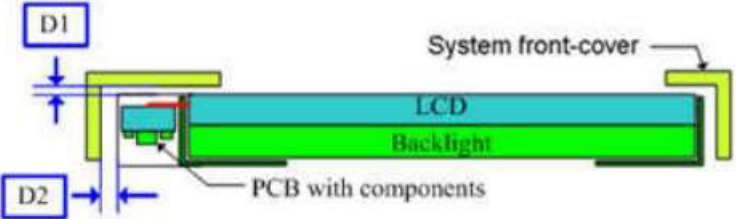

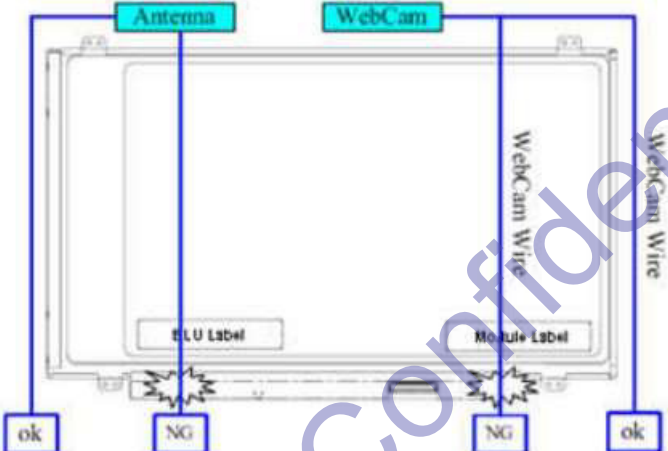

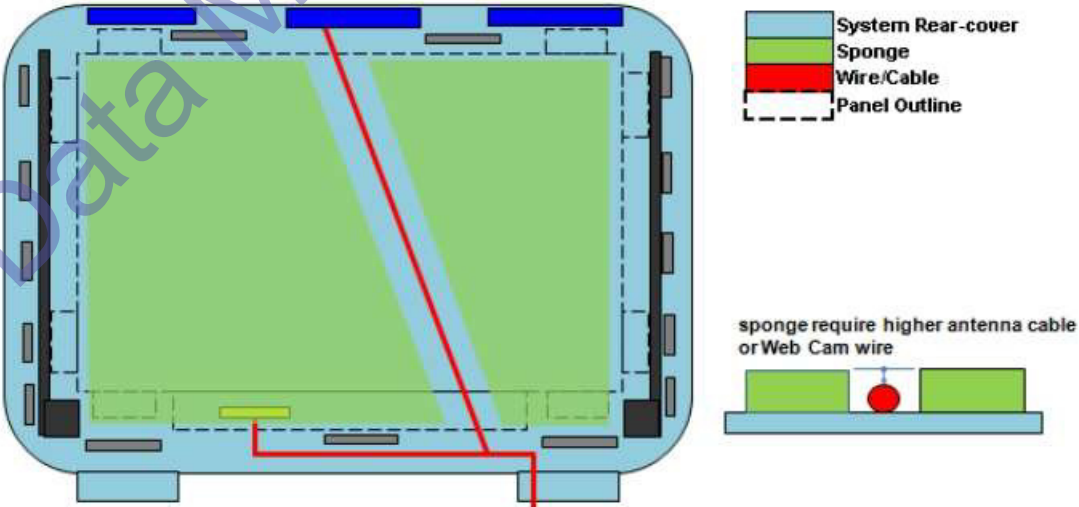

Ver.7

<p>0.</p>	<p><b>Permanent deformation of system cover after reliability test</b></p> 
<p>Definition</p>	<p>System cover including front and rear cover may deform during reliability test. Permanent deformation of system front and rear cover after reliability test should not interfere with panel. Because it may cause issues such as pooling, abnormal display, white spot, and also cell crack. Note: If the interference can not be avoided, please feel free to contact INX FAE Engineer for collaboration design. We can help to verify and pass risk assessment for customer reference.</p>
<p>1.</p>	<p><b>Design gap A between panel &amp; any components on system rear-cover</b></p> 
<p>Definition</p>	<p>Gap between panel's maximum thickness boundary &amp; system's inner surface components such as wire, cable, extrusion is needed for preventing from backpack or pogo test fail. Because zero gap or interference may cause stress concentration. Issues such as pooling, abnormal display, white spot, and cell crack may occur. Maximum flatness of panel and system rear-cover should be taken into account for gap design. Note: If the interference can not be avoided, please feel free to contact INX FAE Engineer for collaboration design. We can help to verify and pass risk assessment for customer reference.</p>
<p>2</p>	<p><b>Design gap B1 &amp; B2 between panel &amp; protrusions</b></p>

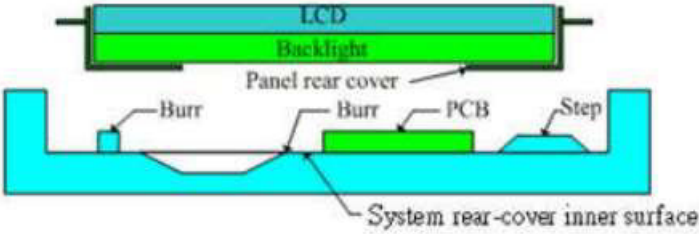

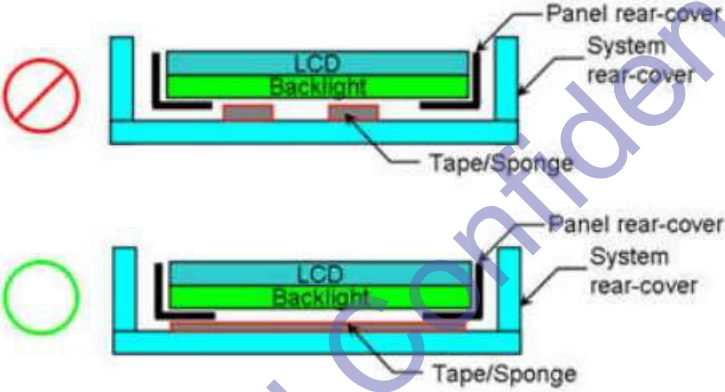

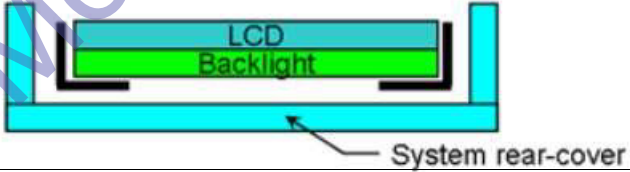

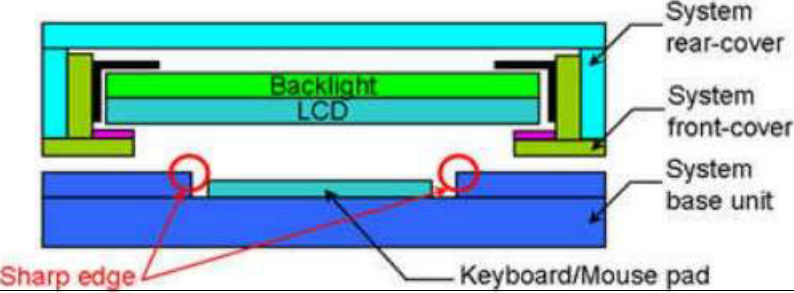

## PRODUCT SPECIFICATION

	
<p>Definition</p>	<p>Gap between panel &amp; protrusions is needed to prevent shock test failure. Because protrusions with small gap may hit panel during the test. Issue such as cell crack, abnormal display may occur.</p> <p>The gap should be large enough to absorb the maximum displacement during the test. Note: If the interference can not be avoided, please feel free to contact INX FAE Engineer for collaboration design. We can help to verify and pass risk assessment for customer reference.</p>
<p>3</p>	<p><b>Design gap C between system front-cover &amp; panel surface.</b></p>
	
<p>Definition</p>	<p>Gap between system front-cover &amp; panel surface is needed to prevent pooling or glass broken. Zero gap or interference such as burr and warpage from mold frame may cause pooling issue near system front-cover opening edge. This phenomenon is obvious during swing test, hinge test, knock test, or during pooling inspection procedure.</p> <p>To remain sufficient gap, design with system rib higher than maximum panel thickness is recommended.</p> <p>Note: If the interference can not be avoided, please feel free to contact INX FAE Engineer for collaboration design. We can help to verify and pass risk assessment for customer reference.</p>
<p>4</p>	<p><b>Design gap D1 &amp; D2 between system front-cover &amp; PCB Assembly.</b></p>

## PRODUCT SPECIFICATION

	
Definition	Same as point 2 and 3, but focus on PCBA side.
5	<b>Interference examination of antenna cable and WebCam wire</b>
	
Definition	<p>Antenna cable or WebCam wire should not overlap with panel outline. Because issue such as abnormal display &amp; white spot after backpack test, hinge test, twist test or pogo test may occur.</p> <p>Note: If the interference can not be avoided, please feel free to contact INX FAE Engineer for collaboration design. We can help to verify and pass risk assessment for customer reference.</p>
6	<b>Interference examination of antenna cable and Web Cam wire</b>
	
	<p>If the antenna cable or Web Cam wire must overlap with the panel outline, both sides of the antenna cable or Web Cam wire must have a sponge(Sponge material can not contain NH3) and sponge require higher antenna cable or Web Cam wire.( Antenna cable or Web Cam wire should not overlap with TCON,COF/FPC,Driver IC)</p> <p>Note: If the interference can not be avoided, please feel free to contact INX FAE Engineer for collaboration design. We can help to verify and pass risk assessment for customer</p>

## PRODUCT SPECIFICATION

	reference.
7	<b>System rear-cover inner surface examination</b>
	 <p>The diagram shows a cross-section of the system rear-cover inner surface. It features a light blue U-shaped frame. Inside, there is a green LCD panel with a yellow backlight. A blue panel rear cover is positioned above the LCD. A green PCB is mounted on the inner surface. Labels include: LCD, Backlight, Panel rear cover, Burr (at the edge of the panel rear cover), PCB, Step (on the inner surface), and System rear-cover inner surface.</p>
Definition	Burr at logo edge, steps, protrusions or PCB board may cause stress concentration. White spot or glass broken issue may occur during reliability test.
8	<b>Tape/sponge design on system inner surface</b>
	 <p>The diagram shows two cross-sectional views of the system inner surface. The top view is marked with a red 'X' and shows a red Tape/Sponge layer placed on the inner surface, but it is not fully covered under the panel rear cover. The bottom view is marked with a green circle and shows the red Tape/Sponge layer fully covered under the panel rear cover. Labels include: Panel rear-cover, System rear-cover, and Tape/Sponge.</p>
Definition	To prevent abnormal display & white spot after scuffing test, hinge test, pogo test, backpack test, tape/sponge should be well covered under panel rear-cover. Because tape/sponge in separate location may act as pressure concentration location.
9	<b>Material used for system rear-cover</b>
	 <p>The diagram shows a cross-section of the system rear-cover material. It is a light blue U-shaped frame. Inside, there is a green LCD panel with a yellow backlight. Labels include: LCD, Backlight, and System rear-cover.</p>
Definition	System rear-cover material with high rigidity is needed to resist deformation during scuffing test, hinge test, pogo test, or backpack test. Abnormal display, white spot, pooling issue may occur if low rigidity material is used. Pooling issue may occur because screw's boss positioning for module's bracket are deformed during open-close test. Solid structure design of system rear-cover may also influence the rigidity of system rear-cover. The deformation of system rear-cover should not caused interference.
10	<b>System base unit design near keyboard and mouse pad</b>
	 <p>The diagram shows a cross-section of the system base unit design near the keyboard and mouse pad. It features a blue base unit with a green LCD panel and yellow backlight. Labels include: System rear-cover, System front-cover, System base unit, Keyboard/Mouse pad, and Sharp edge (pointing to a red circle on the base unit).</p>
Definition	To prevent abnormal display & white spot after scuffing test, hinge test, pogo test, backpack

## PRODUCT SPECIFICATION

	test, sharp edge design in keyboard surface may damage panel during the test. We suggest to use slope edge design, or to reduce the thickness difference of keyboard/mouse pad from the nearby surface.
<b>11</b>	<b>Screw boss height design</b>
Definition	Screw boss height should be designed with respect to the height of bracket bottom surface to panel bottom surface + flatness change of panel itself. Because gap will exist between screw boss and bracket, if the screw boss height is smaller. As result while fastening screw, bracket will deformed and pooling issue may occur.
<b>12</b>	<b>Assembly SOP examination for system front-cover with Hook design</b>
Definition	To prevent panel crack during system front-cover assembly process with hook design, it is not recommended to press panel or any location that related directly to the panel.
<b>13</b>	<b>Assembly SOP examination for system front-cover with Double tape design</b>
Definition	To prevent panel crack during system front-cover assembly process with double tape design, it is only allowed to give slight pressure (MAX 3 Kgf/50mm <sup>2</sup> ) with large contact area. This can help to distribute the stress and prevent stress concentration. We also suggest putting the system on a flat surface stage to prevent unequal stress distribution during the

## PRODUCT SPECIFICATION

	assembly.														
14	<b>System front-cover assembly reference with Double tape design</b>														
Definition	To prevent system front-cover peeling at double tape contact area, Height difference between system front-cover assembly reference such as wall or components stack (wire, spacer) and double tape top surface must be less than 0.05mm.														
15	<b>Touch Application : TP and LCD Module Combination for White Line Prevention</b>														
	<table border="1" data-bbox="416 1532 1203 1865"> <thead> <tr> <th colspan="2">Parameter consideration for White Line Issue :</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>TP VA to LCD AA distance</td> </tr> <tr> <td>2</td> <td>TP Assembly tolerance</td> </tr> <tr> <td>3</td> <td>TP Ink Printing tolerance</td> </tr> <tr> <td>4</td> <td>Sponge thickness and tolerance</td> </tr> <tr> <td>5</td> <td>Inspection/Viewing Angle specification</td> </tr> <tr> <td>6</td> <td>Polarizer edge to LCD AA distance and tolerance</td> </tr> </tbody> </table> <p>Polarizer edge to LCD AA distance can be derived by "AA~Outline" – "CF Pol~Outline" with respect to INX 2D Outline Drawing on each side.</p>	Parameter consideration for White Line Issue :		1	TP VA to LCD AA distance	2	TP Assembly tolerance	3	TP Ink Printing tolerance	4	Sponge thickness and tolerance	5	Inspection/Viewing Angle specification	6	Polarizer edge to LCD AA distance and tolerance
Parameter consideration for White Line Issue :															
1	TP VA to LCD AA distance														
2	TP Assembly tolerance														
3	TP Ink Printing tolerance														
4	Sponge thickness and tolerance														
5	Inspection/Viewing Angle specification														
6	Polarizer edge to LCD AA distance and tolerance														

**PRODUCT SPECIFICATION**

	
<p>Definition</p>	<p>For using in Touch Application: to prevent White Line appears between TP and LCD module combination, the maximum inspection angle location must not fall onto LCD polarizer edge, otherwise light line near edge of polarizer will be appear.</p> <p>Parameters such as TP VA to LCD AA distance, TP assembly tolerance, TP Ink printing tolerance, Sponge thickness and tolerance, and Maximum Inspection/Viewing Angle, must be considered with respect to LCD module's Polarizer edge location and tolerance. This consideration must be taken at all four edges separately.</p> <p>The goal is to find parameters combination that allow maximum inspection angle falls inside polarizer black margin area.</p> <p>Note: Information for Polarizer edge location and its tolerance can be derived from INX 2D Outline Drawing ("AA ~Outline" - "CF Pol~Outline").</p> <p>Note: Please feel free to contact INX FAE Engineer. By providing value of parameters above on each side, we can help to verify and pass the white line risk assessment for customer reference.</p>
<p>16</p>	<p><b>Color of system front-cover material</b></p>
	
<p>Definition</p>	<p>To prevent light leakage is seen at system front-cover due to material transparency, we suggest using dark color material (black) for system front-cover design.</p>
<p>17</p>	<p><b>Inspection spec of gap E between system front-cover to LCD module surface</b></p>

## PRODUCT SPECIFICATION

<p>Definition</p>	<p>To maintain gap E (gap of system front-cover to LCD module) in its inspection spec, especially at location with maximum LCD deformation (center of LCD length), we recommend adding spacer with design gap A smaller or equal to gap E.          The allowable spacer mating location is on module metal frame outside LCD Active-Area.          Note: If the interference can not be avoided, please feel free to contact INX FAE Engineer for collaboration design. We can help to verify and pass risk assessment for customer reference.</p>

## PRODUCT SPECIFICATION

### Appendix. LCD MODULE HANDLING MANUAL

<b>Purpose</b>	<ul style="list-style-type: none"> <li>• This SOP is prepared to prevent panel dysfunction possibility through incorrect handling procedure.</li> <li>• This manual provides guide in unpacking and handling steps.</li> <li>• Any person which may contact / related with panel, should follow guide stated in this manual to prevent panel loss.</li> </ul>
<b>1.</b>	<b>Unpacking</b>
<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  </div> <div style="text-align: center;"> <p>Open carton</p>  </div> <div style="text-align: center;"> <p>Remove EPE Cushion</p>  </div> </div> <div style="display: flex; justify-content: space-around; align-items: center; margin-top: 20px;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div> <div style="display: flex; justify-content: space-around; margin-top: 10px;"> <div style="text-align: center;"> <p>Open plastic bag</p> </div> <div style="text-align: center;"> <p>Cut Adhesive Tape</p> </div> <div style="text-align: center;"> <p>Remove EPE Cushion</p> </div> </div>	
<b>2.</b>	<b>Panel Lifting</b>

## PRODUCT SPECIFICATION

<p><b>Remove PET Cover</b></p> 	<p><b>Remove PE Foam</b></p> 	<p><b>Handle with care (see next page)</b></p> 
		
<p><b>Finger Slot</b></p> <p>Use slots at both sides for finger insertion. Handle panel upward with care.</p>		
<p>3. Do and Don't</p>		
<p><b>Do :</b></p> <ul style="list-style-type: none"> <li>- Handle with both hands.</li> <li>- Handle panel at left and right edge.</li> </ul> 	<p><b>Don't :</b></p> <ul style="list-style-type: none"> <li>- Lifting with one hand.</li> <li>- Handle at PCBA side.</li> </ul>  	

## PRODUCT SPECIFICATION

Don't :

- Stack panels.

- Press panel.

Don't :

- Put foreign stuff onto panel

- Put foreign stuff under panel

Don't :

- Paste any material onto white reflector sheet

Don't :

- Pull / Push white reflector sheet

## PRODUCT SPECIFICATION

Don't :

- Hold at panel corner.

Don't :

- Twist panel.

Do :

- Hold panel at top edge while inserting connector.

Don't :

- Press white reflector sheet while inserting connector.

## PRODUCT SPECIFICATION

Do :

- Remove panel protector film starts from pull tape

Don't :

- Remove panel protector film From film another side.

Don't :

- Touch or Press PCBA Area.
