Parameter	Symbol	Value			Unit	Note
		Min.	Typ.	Max.		
LED Light Bar Input Voltage Per Input Pin	VPIN	37.7	41.6	44.2	V	(1), Duty=100%, IPIN=145mA
LED Light Bar Current Per Input Pin	IPIN		145		mA	(1), (2) Duty=100%
LED Life Time	LLED	30000			Hrs	(3)
Power Consumption	PBL	-	96.5	102.5	W	(1) Duty=100%, IPIN=145mA

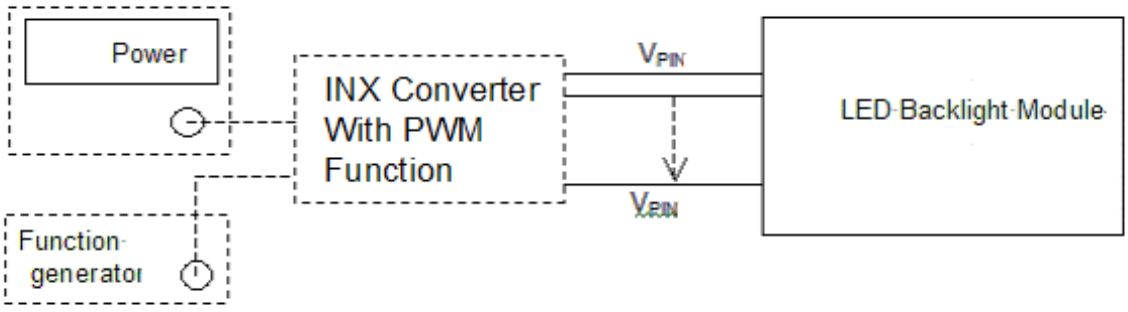
Note (1) LED light bar input voltage and current are measured by utilizing a true RMS multimeter as shown below:

Note (2) PBL = IPIN × VPIN × (16) input pins.

Note (3) The lifetime of LED is estimated data and defined as the time when LED packages continue to operate under the conditions at Ta = 25 ±2 ℃ and I= 145 mA (per chip) until the brightness becomes ≦ 50% of its original value. Operating LED under high temperature environment will reduce life time and lead to color shift.

Note (4) The module must be operated with constant driving current.

Note (5) If converter has PWM function, the PWM Frequency setting must be equal to 200Hz.



4.3.4 CONVERTER ELECTRICAL CHARACTERISTICS

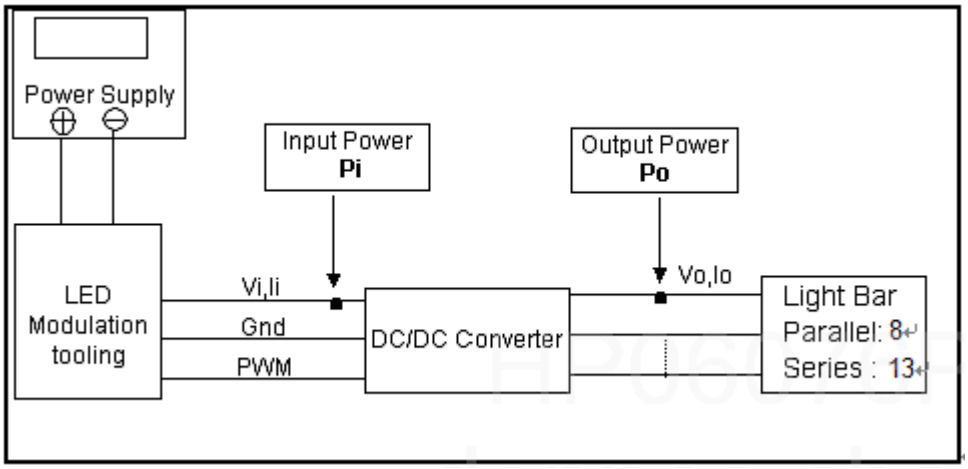
	PWM Low Level		0	-	0.15	V	
PWM Noise Range		VNoise	-	-	0.1	V	
PWM Control Frequency		f_{PWM}	190	200	20K	Hz	(3)
PWM Control Duty Ratio		-	5	-	100	%	(3),@190Hz<f_{PWM}<1kHz
			20	-	100	%	(3),@1kHz≦f_{PWM}<20kHz
LED Life Time		L_{LED}	30000	-	-	Hrs	(2)

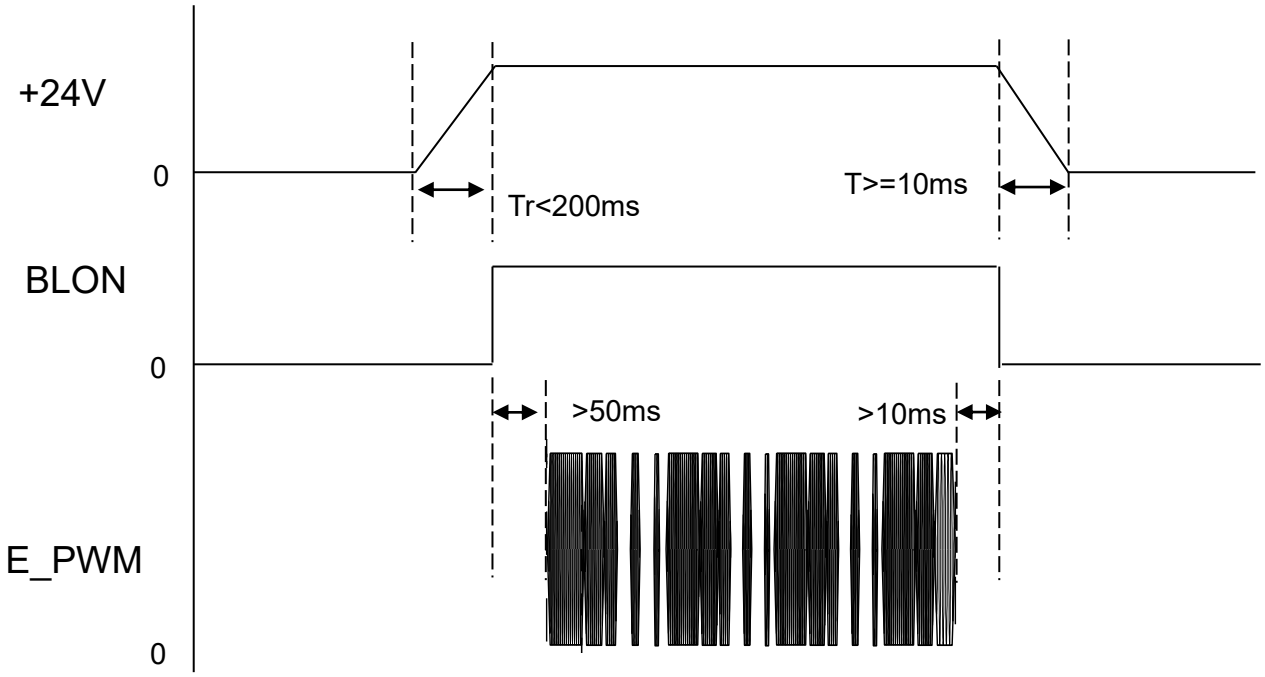
Note (1)LED current is measured by utilizing a high frequency current meter as shown below:



Note (2) The lifetime of LED is estimated data and defined as the time when it continues to operate under the conditions at Ta = 25 ±2 °C and Duty 100% until the brightness becomes ≦ 50% of its original value. Operating LED at high temperature condition will reduce life time and lead to color shift.

Note (3) At 190 ~1kHz PWM control frequency, duty ratio range is restricted from 5% to 100%. 1K ~20kHz PWM control frequency, duty ratio range is restricted from 20% to 100%.

If PWM control frequency is applied in the range from 1KHz to 20KHZ, The "non-linear" phenomenon on the Backlight Unit may be found. So It's a suggestion that PWM control frequency should be less than 1KHz.



Note： While system is turned ON or OFF, the power sequences must follow as below descriptions

Turn ON sequence: Vi(+24V) → BLON → E_PWM signal

Turn OFF sequence: E_PWM signal → BLON → Vi(+24V)

The definition of T_r : the time period of 10%*V_i to 90%*V_i

The definition of T_f : the time period of 90%*V_i to 10%*V_i

The following chart is the BLU Dimming for your reference.

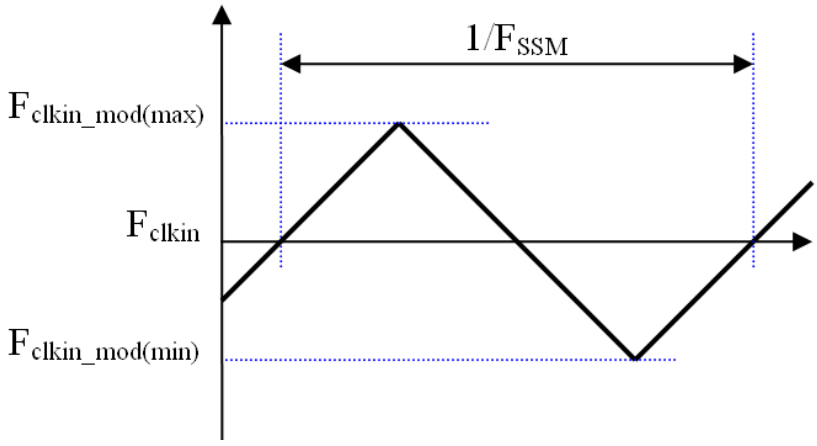
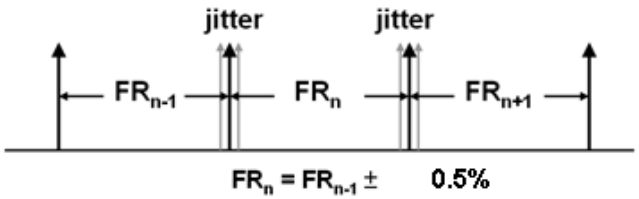
Note (4) The SSCG (Spread spectrum clock generator) is defined as below figures.



Note (5) The frame-to-frame jitter of the input frame rate is defined as the above figures. FRn = FRn-1 ± 0.5%.

Note (6) The setup of the frame rate jitter > 0.5% may result in the cosmetic LED backlight symptom and the electric function is affected.



Note (7) The Tv(Tvd+Tvb) must be integer, otherwise, this module would operate abnormally.

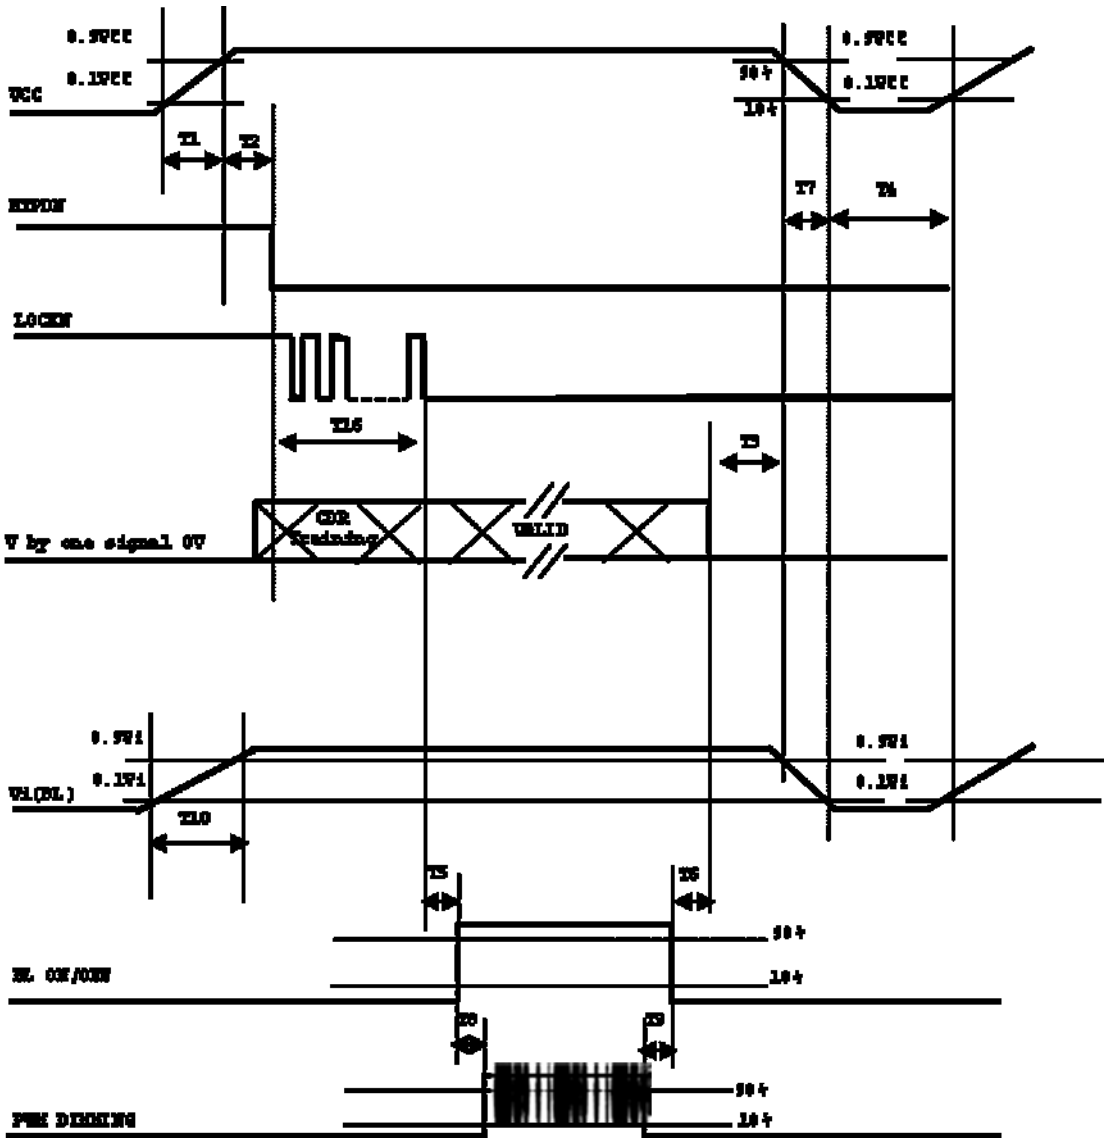
4.8 POWER ON/OFF SEQUENCE

(Ta = 25 ± 2 ºC)

To prevent a latch-up or DC operation of LCD module, the power on/off sequence should be as the diagram below.



Parameter	Value			Units
	Min	Typ	Max	
T1	0.5	-	10	ms
T2	0	-	-	ms
T3	0	-	-	ms
T4	500	-	-	ms
T5	450	-	-	ms
T6	200	-	-	ms
T7	10	-	100	ms
T8	10	-	-	ms
T9	10	-	-	ms
T10	20	-	50	ms
T16	10	-	-	ms

Note (1) The supply voltage of the external system for the module input should follow the definition of Vcc.

Note (2) Apply the LED voltage within the LCD operation range. When the backlight turns on before the LCD operation or the LCD turns off before the backlight turns off, the display may momentarily become abnormal screen..

Note (3) In case of Vcc is in off level, please keep the level of input signals on the low or high impedance. If T2<0, that maybe cause electrical overstress failure.

Note (4) T4 should be measured after the module has been fully discharged between power off and on period..

Note (5) Interface signal shall not be kept at high impedance when the power is on

Note (6) Vcc must decay smoothly when power-off

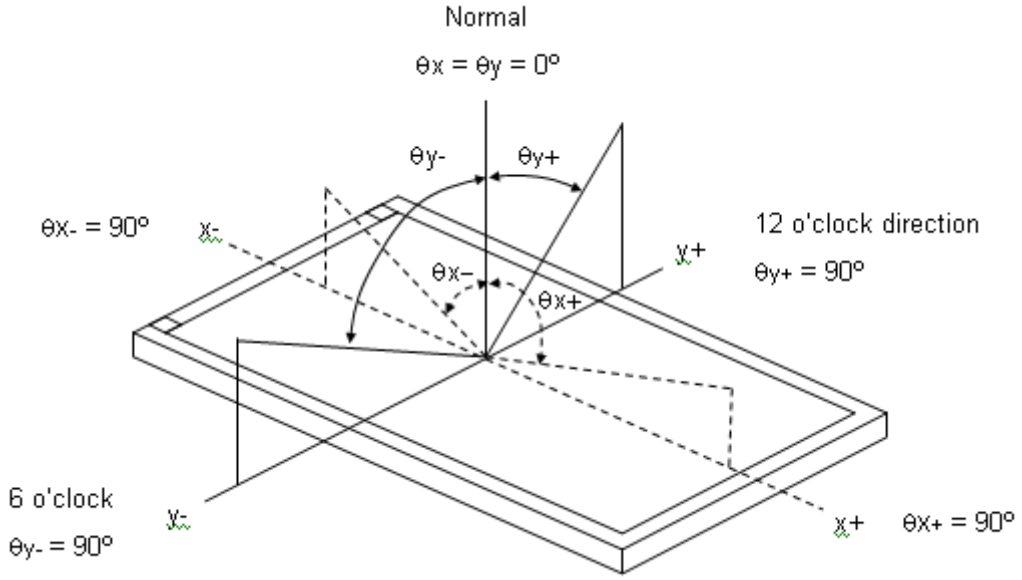
Definition：

Grayscale Maximum : Grayscale 255 (10 bits: grayscale 1023 ; 8 bits : grayscale 255 ; 6 bits: grayscale 63)

White : Luminance of Grayscale Maximum (All R,G,B)

Black : Luminance of grayscale 0 (All R,G,B)

Note (1) Definition of Viewing Angle (θx, θy):

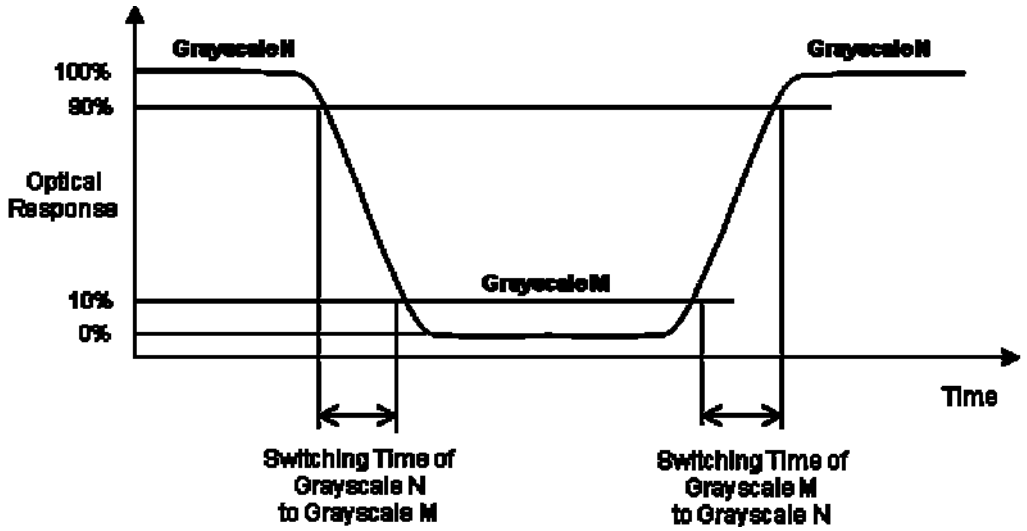


Note (2) Definition of Contrast Ratio (CR):

The contrast ratio can be calculated by the following expression at center point.

Contrast Ratio (CR) = White / Black

Note (3)Definition of Response Time (T_{GTG_AVE}):



N, M (separately) : Grayscale 0, 31, 63, 95, 127, 159, 191, 223 and 255 (8 bits), 9 levels.

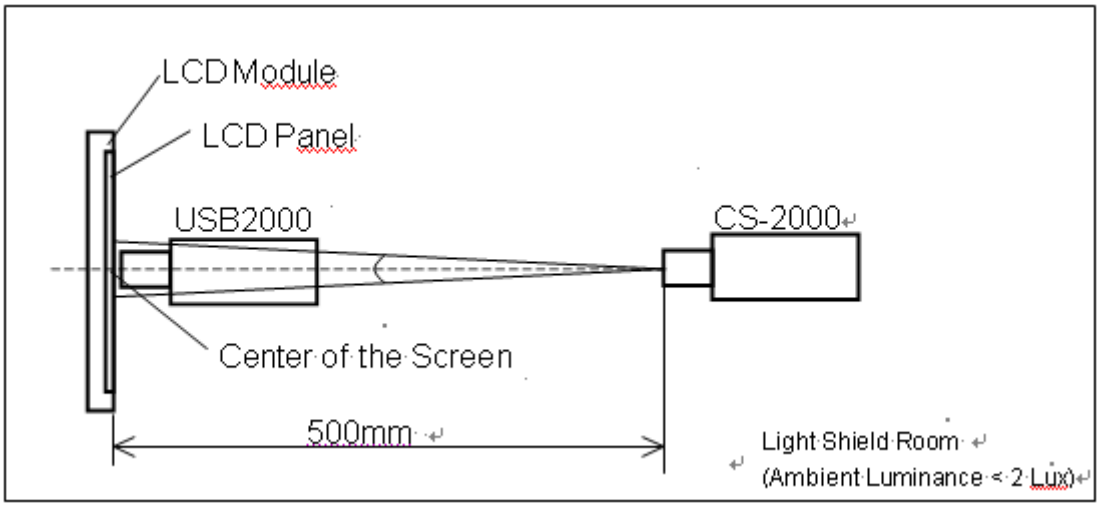
T_{GTG_AVE} : The total average of the T_{GTG} data which is switching time of grayscale N to M, 9x9 matrix except the same grayscales. It's measured by Innolux GTG instrument.

Note (4) Definition of Luminance of White (L_C):

Measure the luminance of White at center point

Note (5) Measurement Setup:

The LCD module should be stabilized at given temperature to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 60 minutes in a windless room.



Note (6) Definition of White Variation (δW):

Measure the luminance of White at 9 points.

Luminance of White : L(X) , where X is from 1 to 9.

$$\delta W = \frac{\text{Maximum}[L(1),L(2),L(3),L(4),L(5),L(6),L(7),L(8),L(9)]}{\text{Minimum}[L(1),L(2),L(3),L(4),L(5),L(6),L(7),L(8),L(9)]}$$

9. PRECAUTIONS

9.1 ASSEMBLY AND HANDLING PRECAUTIONS

(1) There should be no condensation on the surface of panel during test.

(2) In the standard conditions, there is no function failure issue occurred. All the cosmetic Specification is judged before reliability test.

(3) Before cosmetic and function test, the product must have enough recovery time, at least 24 hours at room temperature.

(4) Be sure to turn off power supply when inserting or disconnecting from input connector.

(5) To avoid ESD(Electro Static Discharde) damage,be sure to ground yourself before handing TFT-LCD Module.

(6) Do not apply rough force such as bending or twisting to the module during assembly.TFT-LCD Module is not allowed to be twisted & bent even force is added on module in a very short time.

(7) To assemble or install module into user's system can be only in clean working areas. The dust and oil may cause electrical short or worsen the polarizer.

(8) It's not permitted to have pressure or impulse on the module because the LCD panel and Backlight will be damaged.

(9) Always follow the correct power sequence when LCD module is connecting and operating. This can prevent damage to the CMOS LSI chips during latch-up.

(10) Do not pull the I/F connector in or out while the module is operating.

(11) Do not disassemble or modify the module.

(12) Use a soft dry cloth without chemicals for cleaning, because the surface of polarizer is very soft and easily scratched.

(13) It is dangerous that moisture come into or contacted the LCD module, because moisture may damage LCD module when it is operating.

(14) High temperature or humidity may reduce the performance of module. Please store LCD module within the specified storage conditions.

(15) When ambient temperature is lower than 10ºC may reduce the display quality. For example, the response time will become slowly.

(16) While touching the panel surface under the patterns with higher grey levels, a shadow or mura phenomenon would be seen.This phenomenon is totally recoverable by switching the patterns to lower grey levels. It is a product featur

(17) Continuous displaying fixed pattern will induce image sticking.It's recommended to use screen saver or shuffle content periodically if fixed pattern is displayed on the screen.

9.2 STORAGE PRECAUTIONS

(1) Do not leave the module in high temperature, and high humidity for a long time. It is highly recommended to store the module with temperature from 0℃ to 35℃ and relative humidity of less than 70%

(2) Do not store the TFT – LCD module in direct sunlight

(3) The module should be stored in dark place. It is prohibited to apply sunlight or fluorescent light in storing

9.3 OPERATION PRECAUTIONS

(1) The LCD product should be operated under normal condition.

Normal condition is defined as below :

Temperature : 20±15℃

Humidity: 65±20%

Display pattern : continually changing pattern(Not stationary)

(2) If the product will be used in extreme conditions such as high temperature,high humidity,high altitude ,display pattern or operation time etc…It is strongly recommended to contact INX for application engineering advice . Otherwise , Its reliability and function may not be guaranteed.

(3) Display pattern: regular switched patterns or moving pictures

Periodical power-off or screen saver is needed after long-term static display,moving picture or black pattern is strongly recommended for screen saver

(4) The ambient temperature near the operated module should be satisfied with the absolute maximum ratings. Sufficient cooling system should be adopted to system.

9.4 SAFETY PRECAUTIONS

(1) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, skin or clothes, it has to be washed away thoroughly with soap.

(2) After the module's end of life, it is not harmful in case of normal operation and storage.

9.5 SAFETY STANDARDS

The LCD module should be certified with safety regulations as follows:

Requirement	Standard	remark
UL	UL62368-1 or updated standard.	
CB	IEC62368-1 or updated standard.	

9.6 OTHER

When fixed patterns are displayed for a long time, remnant image is likely to occur.
