Note2: Definition of response time:

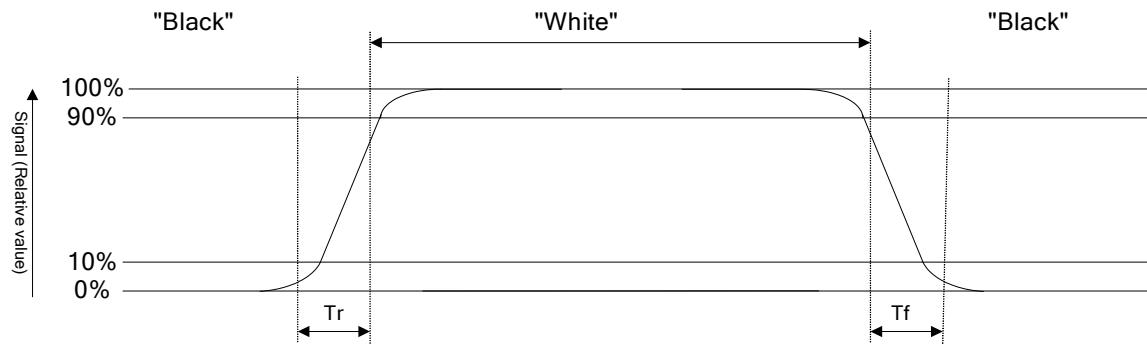

The output signals of photo detector are measured when the input signals are changed from "black" to "white"(falling time) and from "white" to "black"(rising time), respectively. The response time is defined as the time interval between the 10% and 90% of Amplitudes.

Refer to figure as below:

Normally White

Normally Black

Note3: Definition of contrast ratio:

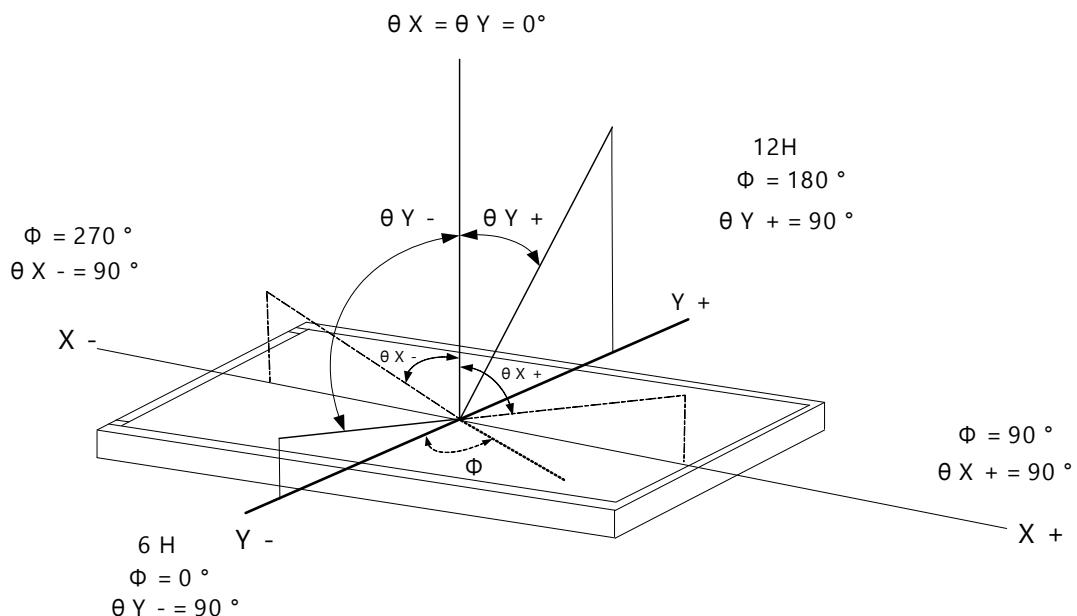

Contrast ratio is calculated with the following formula

Photo detector output when LCD is at "White" state

$$\text{Contrast ratio (CR)} = \frac{\text{Photo detector output when LCD is at "White" state}}{\text{Photo detector output when LCD is at "Black" state}}$$

Note4: Definition of viewing angle:

2.3 Touch Panel Description

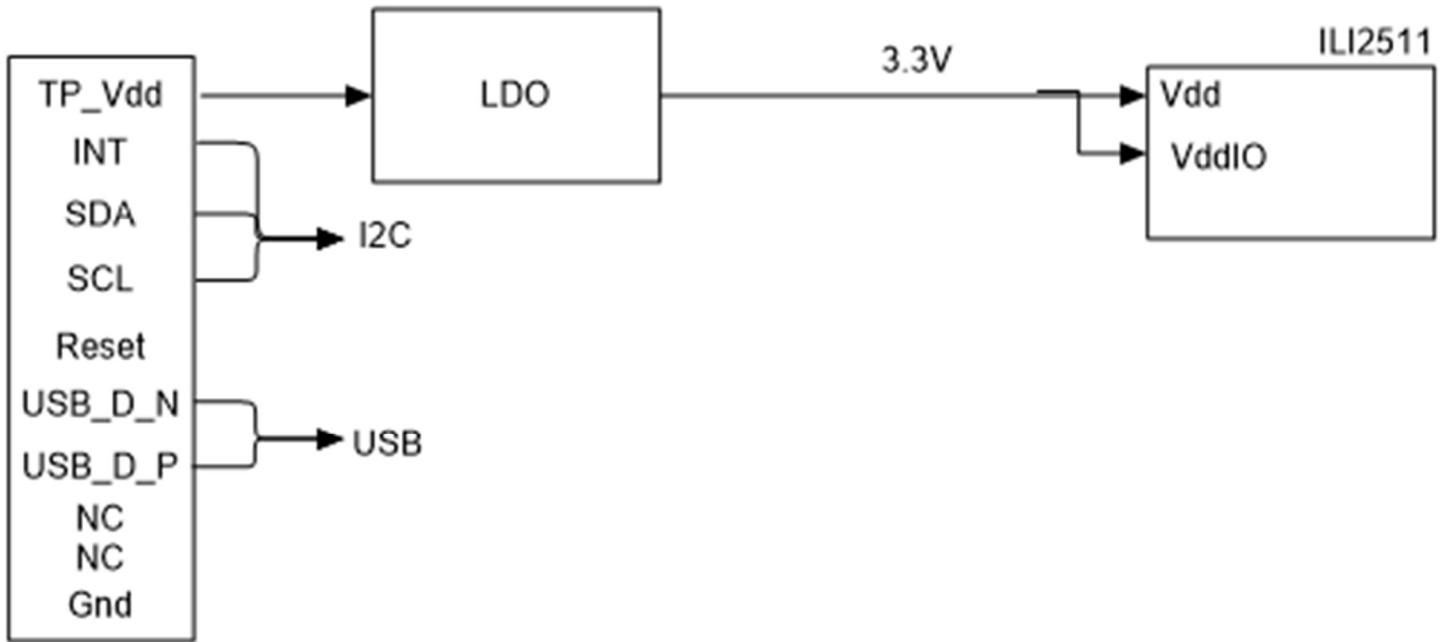

The touch panel can be operated either via I2C or via USB. A list of supported operating system is given in the following table. For drivers listed in the table, please contact your regional Data Modul sales contact.

A recommended connector for the touch tail is OMRON XF2M-1015-1A.

For easy design-in, Data Modul can provide additionally an adaptor for I2C and USB connection (incl. corresponding USB cable). Please contact your regional Data Modul sales contact for further details.

2.3.1 Block Diagram

2.3.2 I2C Operation

TP_VDD, I2C_CHG, I2C_SDA, I2C_SCL and RESET lines are needed for I2C operation. External pull up resistors on SDA and SCL lines are required (recommendation $4.7\text{k}\Omega$). On INT as well as Reset line, there is no additional pull up resistors required. Please note that VddIO voltage is always 3.3V since this voltage is derived from the LDO on the flex tail.

For detailed documentation on the software integration of I2C, please contact your regional Data Modul sales contact.

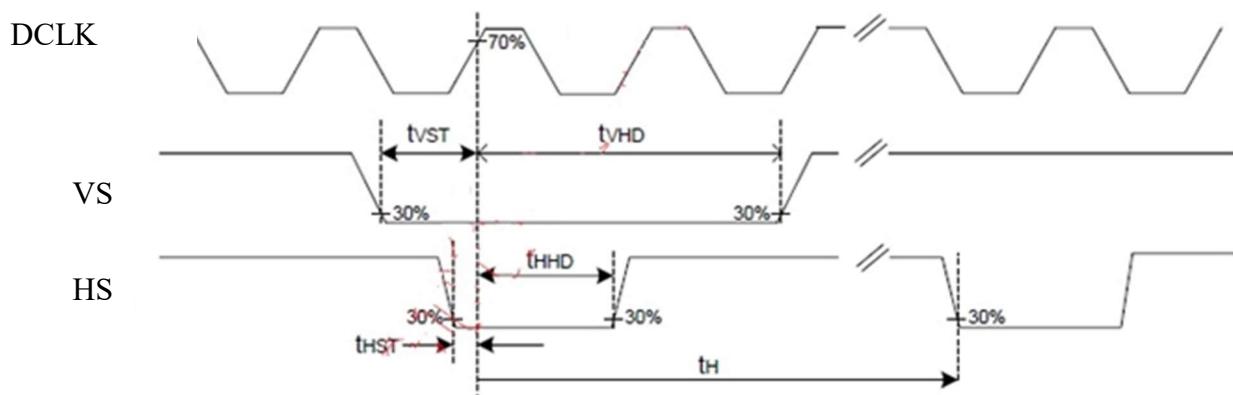

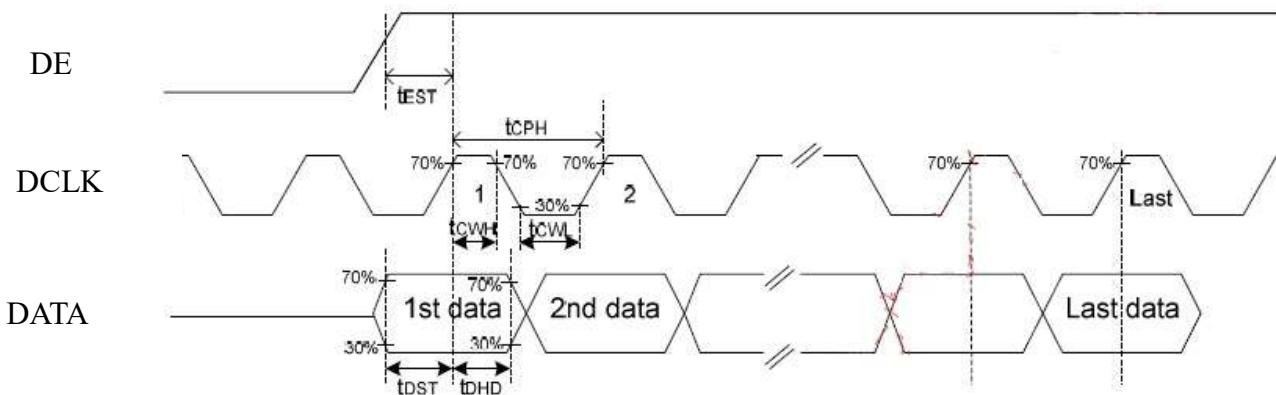

2.3.3 USB Operation

TP_VDD, USB_D_N and USB_D_P are needed for USB operation. The TP will work with most Windows version out of the box using built-in drivers (HIDUSB driver) as well as with Linux.

Please note that Data Module offers the easyAnalyzer, a visualization and evaluation software, for Windows as well as x86 Linux systems. Please contact your regional Data Modul sales contact for further details.

5. PRECAUTION RELATING PRODUCT HANDLING

5.1 SAFETY

- 5.1.1 If the LCD panel breaks , be careful not to get the liquid crystal to touch your skin.
- 5.1.2 If the liquid crystal touches your skin or clothes , please wash it off immediately by using soap and water.

5.2 HANDLING

- 5.2.1 Avoid any strong mechanical shock which can break the glass.
- 5.2.2 Avoid static electricity which can damage the CMOS LSI—When working with the module , be sure to ground your body and any electrical equipment you may be using.
- 5.2.3 Do not remove the panel or frame from the module.
- 5.2.4 The polarizing plate of the display is very fragile. So , please handle it very carefully, do not touch , push or rub the exposed polarizing with anything harder than an HB pencil lead (glass , tweezers , etc.)
- 5.2.5 Do not wipe the polarizing plate with a dry cloth , as it may easily scratch the surface of plate.
- 5.2.6 Do not touch the display area with bare hands , this will stain the display area.
- 5.2.7 Do not use ketonics solvent & aromatic solvent. Use with a soft cloth soaked with a cleaning naphtha solvent.
- 5.2.8 To control temperature and time of soldering is $320 \pm 10^{\circ}\text{C}$ and 3-5 sec.
- 5.2.9 To avoid liquid (include organic solvent) stained on LCM
- 5.2.10 Caution! (LCM products with Capacitive Touch Panel)
 - Strong EMI-sources such as switch-mode power supplies (SMPS) can lead to touch malfunction (e.g. ghost-touches).
 - Therefore, the touch needs to be thoroughly tested inside the target application.
- 5.2.11 Caution: Continuously displaying same static image will result in high possibility of image sticking/image burn-in effect due to TFT panel characteristic.

5.3 STORAGE

- 5.3.1 Store the panel or module in a dark place where the temperature is $25^{\circ}\text{C} \pm 5^{\circ}\text{C}$ and the humidity is below 65% RH.
- 5.3.2 Do not place the module near organics solvents or corrosive gases.
- 5.3.3 Do not crush , shake , or jolt the module.

5.4 TERMS OF WARRANTY

- 5.4.1 Applicable warrant period
 - The period is within thirteen months since the date of shipping out under normal using and storage conditions.
- 5.4.2 Unaccepted responsibility
 - This product has been manufactured to your company's specification as a part for use in your company's general electronic products. It is guaranteed to perform according to delivery specifications. For any other use apart from general electronic equipment, we cannot take responsibility if the product is used in nuclear power control equipment, aerospace equipment , fire and security systems or any other applications in which there is a direct risk to human life and where extremely
